This action is responsive to the remarks of the applicant, filed on 05/15/2006.

Claims 1-22 are presented for examination.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-15 and 16 are rejected under U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The tangibly embodying computer readable media is not tangibly limited to a product that is within and enabled by the specification and claim 16 is not limited to tangible embodiments. As such, the claims are not limited to statutory subject matter and are therefore non-statutory.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 9-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Draves US Patent No. 5,802,590).

3. As per claim 11, the handle administrator, wherein two of the states comprise: an assigned state in which a handle is associated with a resource and can be dereferenced to provide a pointer to that resource; and an unassigned state in which the handle is not associated with any resources.
